RoHS Compliance for Hazardous Substances Elimination

Dear Customer:

Except for Lead (Pb), current Pericom and SaRonix standard products comply with the EU's RoHS (Restriction of Hazardous Substances) Directive 2002/95/EC for non-use of the hazardous materials listed below. Pb is primarily used as part of the solder plating on package terminals/pins, in a ratio of 80 to 90%Sn/10-20% Pb (nominally 0.1 to 1.0% by weight).

For Pericom's Green/Pb-free products, the Hazardous Substances RoHS specification has been met in the following two aspects:

- 1) We guarantee no Green/Pb-free product will contain the following hazardous substances more than that listed in the RoHS Directive. This is ensured for both raw materials and impure ingredients.
- 2) We guarantee that no Green/Pb-free product will use the following hazardous substances in the manufacturing process, and those substances will not be mixed into the product from the surrounding production process.

Hazardous Substances as defined by the RoHS specification:

Lead (Pb): Under 1000 ppm

Cadmium (Cd): Under 100 ppm

Mercury (Hg): Under 1000 ppm

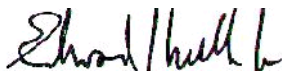

Hexavalent Chromium (Cr [VI]): Under 1000 ppm

Polybrominated Biphenyls (PBB): Under 1000 ppm

Polybrominated Diphenyl Ethers (PBDE): Under 1000 ppm

Further information on Pericom's Green/Pb-free plans and status can be found at our website:
